\* For information on inactive ingredients, see section 2 "Before using the medicine" and section 6 "Additional information"

Read the entire leaflet carefully before you start using this medicine. This leaflet contains concise information about this medicine. If you have any further questions,

consult your doctor or pharmacist. This medicine has been prescribed to treat your illness. Do not pass it on to others. It may harm them, even if it seems

to you that their medical condition is similar to yours. 1. What is this medicine intended for?

#### Tamiflu is intended for the treatment of influenza in adults and children 1 year of age or older, who have presented

influenza symptoms for no more than two days. Tamiflu is intended to prevent influenza in adults and children 1 year of age or older. Tamiflu 75 mg capsules are intended for adults and

children weighing more than 40 kg only. Tamiflu 30 mg and 45 mg capsules are intended for adults

and children one year of age and older. Therapeutic group: Tamiflu contains the active ingredient, oseltamivir,

and belongs to a group of antiviral medicines named

## "neuraminidase inhibitors". These medicines prevent the

flu virus from spreading inside the body and help ease or prevent symptoms of the flu virus infection. Influenza is an infection caused by a virus. The signs of the flu generally include a sudden fever (more than 37.8°C), cough, runny or stuffy nose, headaches, muscle aches and

extreme tiredness. These symptoms can also be caused by other infections. True influenza infection only occurs during annual outbreaks (epidemics) when flu viruses spread in the local community. When there is no outbreak of influenza, flu-like symptoms are may be caused by different types of illnesses. 2. Before using the medicine Do not use this medicine if: You are sensitive (allergic) to the active ingredient,

# oseltamivir, or to any of the other ingredients in this medicine (see section 6 - "Additional information").

# Special warnings about using this medicine:

Do not use this medicine without consulting your doctor before beginning treatment: • if you are allergic to other medicines if you suffer from impaired kidney function, your dose

#### may need adjustment • if you have a severe medical condition, which may

require immediate hospitalization • if your immune system is not working

- if you have chronic heart disease or chronic respiratory
- disease During treatment with Tamiflu, tell your doctor

(neuropsychiatric events), especially in children and adolescents. These may be signs of rare but serious side Tamiflu is not a flu vaccine: It treats infection or prevents the flu virus from spreading. A vaccine gives you antibodies

against the virus. Tamiflu will not change the effectiveness

of a flu vaccine, and your doctor may recommend both.

immediately if you notice changes in behavior or mood

Tamiflu and other medicines If you are taking or have recently taken other medicines, including nonprescription medications and dietary supplements, tell your doctor or pharmacist. Particularly if you are taking:

#### • methotrexate (used to treat e.g., rheumatoid arthritis) • phenylbutazone (used to treat pain and inflammation)

• chlorpropamide (used to treat diabetes)

 probenecid (used to treat gout) **Using Tamiflu and food** Swallow the capsules whole with water. Do not break or chew the capsules.

The medicine can be taken with or without food. However,

taking the medicine with food can reduce the chance of feeling sick (nausea or vomiting).

Pregnancy, breastfeeding and fertility Pregnancy

You must tell your doctor if you are pregnant, if you

think you are pregnant or if you are planning to become

pregnant so that your doctor can decide if Tamiflu is the

right medicine for you. Breastfeeding The effects of Tamiflu on breastfed infants are unknown. You must tell your doctor if you are breastfeeding so that

your doctor can decide if Tamiflu is the right medicine for

Based on preclinical studies, there is no evidence that

Tamiflu affects male or female fertility.

### Consult your doctor or pharmacist before taking any medicine.
