Do not use the medicine if:

Do not use the medicine if:

The patient is hypersensitive (allergic) to Ibuprofen or any of the additional ingredients that the medicine contains (see section 6).

The patient has experienced an allergic reaction in the past (such as bronchospasm, asthma, runny nose, angioedema or urticaria), associated with aspirin (acetylsalicylic acid) or to another medicine from NSAIDs group.

You are in the last three months of pregnancy.

The patient has suffered in the past from gastrointestinal bleeding or perforation, associated with a previous treatment with NSAIDs.

The patient suffers or has suffered in the past from recurring peptic ulcer (at least two different incidents of

recurring peptic ulcer (at least two different incidents of proven peptic ulcer in the gastrointestinal tract or bleeding, or other abnormalities in the gastrointestinal

tract).
The patient suffers from severe renal, cardiac or hepatic insufficiency. Special warnings regarding the use of this medicine

• Before treatment with Nurofen for Children

Before treatment with Nurofen for Children
Suppositories, tell your doctor if:

o The patient suffers or has suffered in the past from
high blood pressure, heart problems or stroke,
since there may be a slight increase in the risk of
occurrence of heart problems as a result of use of
lbuprofen.

o The patient suffers from a risk factor for heart
problems such as diabetes or high cholesterol.

o The patient suffers from asthma or any other
allergic disease of the lungs.

o The patient suffers or has suffered from problems
of liver, kidney, heart, or intestine. The patient
suffers or has suffered from systemic lupus
erythematosus (SLE, an autoimmune disease),
from inflamed skin accompanied by blisters and
peeling skin (exfoliative dermattis), from

eryniematosus (st.c., an autominium disease), from inflamed skin accompanied by blisters and peeling skin (exfoliative dermatitis), from Stevens-Johnson syndrome or similar diseases. The patient suffers from a chronic inflammatory bowel disease such as Crohn's disease or ulcombine cellific.

ulcerative colitis.

The patient suffers from problems in the rectum or anus.
Stop using the medicine if an ulcer or bleeding in the stomach appear during the use of Nurofen for children suppositories.
The patient suffers from an infection - as Nurofen For

The patient suffers from an infection - as Nurofen For Children Suppositories may hide signs of infections such as fever and pain. It is therefore possible that this medicine may delay appropriate treatment of infection, which may lead to an increased risk of complications. This has been observed in pneumonia caused by bacteria and bacterial skin infections related to chickenpox. If you take this medicine while you have an infection and your symptoms of the infection persist or worsen, consult a doctor without delay. The patient suffers from chickenpox - it is recommended to avoid using Nurofen for children suppositories during the time at which the patient has chickenpox. The patient is dehydrated, because of a risk of renal impairment.

The patient is dehydrated, declared on a final impairment. Serious skin reactions have been reported in association with Nurofen For Children Suppositories treatment. You should stop taking Nurofen For Children Suppositories and seek medical attention immediately, if you develop any skin rash, lesions of the mucous membranes, blisters or other signs of allergy since this can be the first sign of a very serious skin reaction. See section 4.

A HISA OF HEAT ALLACK OF SUTUKE: IT YOU SUITER TROM heart problems, or you had a stroke, or you think that you are at a risk of these conditions (for example if you suffer from hypertension, diabetes, high cholesterol, or if you smoke) you must talk to the doctor or pharmacist about the treatment.

serious skin reaction. See section 4.

Additional warnings
The following warnings relate mainly to adults:

Medicines like Nurrofen for Children Suppositories may be associated with a slight increase in risk of heart attack (myocardial infarction) or stroke. The probability of risk increases with taking higher dosages and with prolonged duration of treatment. Do not exceed the recommended dosage nor a treatment duration exceeding 3 days.

A risk of heart attack or stroke: if you suffer from heart problems, or you had a stroke, or you think that

auour rine treatment.

Elderly: elderly patients are more likely to suffer from side effects such as stomach bleeding or perforation which may be life threatening. use the medicine around or 12 days after taking
mifepristone.

mirepristone.

Several anticoagulants (i.e. blood-thinners/anti-thrombotic, such as aspirin/acetyl salicylic acid, warfarin, ticlopidine), several medicines for reducing high blood pressure (ACE inhibitors such as captopril, beta-blockers such as atenolo or angiotensin II receptor blocker such as losartan) and other medicines may affect or be affected by the treatment with Ibuprofen. Therefore you should always consult a doctor before using Ibuprofen with other medicines.

If you are not sure about the medicines the patient is being treated with, show the medicines to a doctor or a pharmacist.

Pregnancy, breastfeeding and fertility:
Pregnancy:
Ibuprofen belongs to a group of medicines that may harm women's fertility. This condition is reversible after discontinuing the use of the medicine. If taken occasionally, it is unlikely that this medicine will affect the chance of getting pregnant.

However if you are trying to conceive, consult a doctor before using the medicine.

This medicine has a possible side effect of renal injury in the fetus and low levels of amniotic fluid as of the 20th week of pregnancy. It is recommended to avoid using medicines of the NSAIDs class as of the 20th week of

It is not recommended to use Ibuprofen during the first 6 months of pregnancy, consult a doctor before using this medicine during the first 6 months of pregnancy. Do not use Nurofen for Children Suppositories if you are in the last 3 months of pregnancy. Breastfeeding.

Ibuprofen and its metabolites can pass through breast milk in very low concentrations. There is no knowledge of harmful effects on infants, therefore there is no need to stop breastfeeding in case of short-term treatment with the medicine when used according to the recommended dosage for the treatment of mild to moderate pain and fever reduction.

fever reduction. **Driving and use of machinery**The medicine has no effect or has a negligible effect on the ability to drive or operate machinery. 3. How to use the medicine? Check with your doctor or pharmacist if you are not suabout the dosage and the treatment regimen of the
