PATIENT LEAFLET IN ACCORDANCE WITH THE PHARMACISTS' REGULATIONS (PREPARATIONS) - 1986

The medicine is dispensed with a doctor's prescription only

Keppra oral solution 100 mg/mL

The active ingredient and its concentration:

Levetiracetam 100 mg/1 ml

- For a list of inactive ingredients and allergens see section 6. Read the entire leaflet carefully before using the medicine. This leaflet contains concise information about the medicine. If you have any other
- questions, refer to the doctor or the pharmacist. This medicine has been prescribed for you. Do not pass it on to others. It may harm them even if it seems to you that their medical condition is similar. This medicine is not intended for use in babies and children under 4 years of age.

1. What is the medicine intended for?

1. As monotherapy in different types of epilepsy in adults from 16 years of age.

- 2. As adjunctive therapy to other anti-epileptic medicines in:
- Adult and children patients from 4 years of age with different types of epilepsy.
 Adult and adolescent patients from 12 years of age with Juvenile Myoclonic Epilepsy or Idiopathic Generalised Epilepsy.
- Therapeutic class: The active ingredient belongs to the anticonvulsants group

2. Before using the medicine:

Do not use this medicine if:

You are sensitive (allergic) to Levetiracetam or other Pyrrolidone derivatives or any of the additional components the medicine contains (see section 6 below)

Special warnings regarding the use of the medicine:

Before treatment with Keppra, inform the doctor if: You suffer from renal impairment. The doctor may change the medicine's dosage.

- · You observed slower growth or unexpected puberty of your child, contact the attending doctor.
- · You experience symptoms of depression and/or suicidal thoughts. A small number of people who were treated with anti-epileptic medicines such as Keppra have experienced suicidal or destructive thoughts towards themselves.
- Taking anticonvulsants may increase the risk for suicidal actions or thoughts. You and your family members must pay attention to changes in mood and behavior patterns. Watch for signs indicating risk of suicide, such as: talking or thinking about wanting to hurt yourself, introversion and withdrawal from family and friends, depression or worsening of existing depression,
- You or anyone in your family has a history of irregular heart rate (according to an EKG test) or if you have a medical condition or you are taking medicines that can cause irregular heart rate or disturbances in salt balance.
- One of the following side effects worsens or persists for more than a few days:

 Unusual thoughts, irritability or more aggressive reactions than usual, or if you or your family and people around you observe significant changes in

 your mood or behavior.
- Epilepsy worsening: rarely, you may experience increased frequency or worsening of the attacks, particularly during the first month following the beginning of treatment or upon dosage increase. If during treatment the frequency of the attacks increases (e.g., more attacks) or if they worsen, contact the treating doctor as soon as possible
- In a very rare form of early-onset epilepsy (epilepsy associated with SCN8A mutations) that causes multiple types of seizures and impairs skills, the seizures may persist or worsen during the treatment.
- In case one or more of these signs or any other alarming behavioral pattern appears contact the doctor immediately!

Children and adolescents

Keppra is not intended to be a monotherapy for children and adolescents under the age of 16.

- Drug interactions:
- If you are taking or have recently taken other medicines including non-prescription medicines and food supplements, tell the doctor or the pharmacist. Especially if you are taking:
 Macrogol (laxative). Do not take Macrogol for an hour before or after taking Keppra, since it may reduce the medicine's efficiency
- · Temozolomide. Liver function should be evaluated before starting a combination therapy of temozolomide and Keppra. In case a combination therapy has been decreed, liver function tests should be performed regularly during therapy and termination of the combined therapy should be considered as necessary.

Use of the medicine and food

- The medicine can be diluted in a glass of water. The medicine may be taken with or without food. After taking this medicine, you may feel a bitter taste. Use of the medicine and alcohol consumption
- No data is available regarding an interaction between alcohol and this medicine. Pregnancy, breastfeeding and fertility
- If you are pregnant, breastfeeding, thinking you might be pregnant or planning to become pregnant, you should consult the doctor before taking this medicine. Keppra may be used during pregnancy, if after careful evaluation the doctor deems this treatment necessary. Do not stop the treatment without consulting a doctor. The risk of causing congenital malformations in the fetus cannot be completely ruled out.
- Breastfeeding is not recommended during treatment with Keppra.

Driving and operating machinery

- Keppra may impair your ability to drive or operate heavy machinery, because you might feel drowsy. This effect occurs primarily in the beginning of treatment and after increasing the dose. Do not drive or operate heavy machinery until you feel fit to perform these actions Children should be cautioned against riding a bicycle or playing near a road etc.
- Important information about some ingredients of the medicine Keppra solution contains Methylparaben and Propylparaben, which may cause an allergic reaction (it may appear after the medicine has been used for
- some time).
- Keppra solution contains Maltitol. If you have been told that you are suffering from sensitivity to certain types of sugars, you should contact the doctor before taking this medicine
- 3. How should you use the medicine?

Always use the preparation according to the doctor's instructions. Check with the doctor or pharmacist if you are uncertain about the dosage and how to use the preparation.

The dosage and treatment regimen will be determined by the doctor only

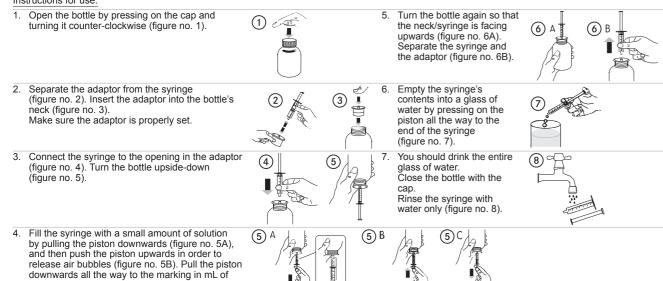

Do not exceed the recommended dose

the dose prescribed by the doctor (figure no. 5C).

Method of administration

The daily dose should be divided into 2 identical doses; one dose should be taken in the morning and one in the evening. Be sure to take the medicine at the same time every day.

After measuring the required dosage with the measuring syringe, the solution may be diluted in a glass of water, and you may drink it with or without food. Instructions for use:

Duration of treatment:

- Keppra is used as a chronic treatment. Treatment with Keppra should be continued as long as your doctor tells you to continue with it. • Do not discontinue the treatment without an instruction from the doctor, since discontinuing the treatment in this way may increase your seizures. If you took an overdose or a child swallowed this medicine by mistake, go to the doctor or the emergency room of the hospital and take the
- package of the medicine with you. The possible side effects in case of an overdose are: drowsiness, irritability, aggressiveness, impaired alertness, breathing suppression and death.
- If you have forgotten to take this medicine at the required time, do not take a double dose. Contact the doctor for directions. ollow the treatment as recommended by the doctor
 - If you stop taking the medicine:
 - When discontinuing the treatment, Keppra should be stopped gradually in order to prevent an increase in seizures.
- If the doctor decides to stop the treatment with Keppra, he will instruct you how to reduce the use gradually. Do not take medicines in the dark! Check the label and the dose every time you take the medicine. Wear glasses if you need them. If you have any other questions regarding use of the medicine, consult the doctor or the pharmacist
